

Muddy Minibeast Sensory Bottle

You will need:

- A dry water bottle
- A cup of soil/compost
- Some plastic minibeasts
- Glue
- Funnel

Method

1. Pour the compost into the bottle. You may find this easier with a funnel so you don't get mud everywhere!
2. Squash the minibeasts into the bottle, on top of the compost.
3. Glue the lid on the bottle to keep everything inside.
4. Start shaking and exploring.
